

**What Makes  
A Nation  
Great?**

**by**

**Indana  
Simonde**

What makes a nation great

### Secondary Preface and Reintroduction

The present book thus far is intended, for all intents and purposes where ever possible, to give an exact insight into the diction and language, as well as the knowledge where defined as to The Temporal Order with regards to general, scientific and philosophical as well as technical and technological points of view. Where those, who are interested in the theory have any idea as to the overall development and knowledge as recited within the Temporal Order, please see the notes in Relativity 1: apparatus of theoretical physics for a breakdown breakdown of the work, which whilst presuming a standard of education such that it corresponds to a university examination; despite the nature of the book, a fair amount of patience and work on the part of the reader will be required in order to understand and develop the idea until you are able to spare author a few polite words over a coffee with regards to the formulation of theorem as to the origins of the Temporal Order:-

What makes a nation great

Top Secret  
Codename: Haven  
Operational Mandate: Fringe  
Analysis and nature of disseminated  
work - Withheld Status

Author has spared himself no amount  
of sleep, nor pains to endeavour to  
present the main ideas in the simplest  
and most intelligible points of note.  
Again, as idea's of note the aim was to  
overcome a struggle within a repetitive  
cycle such that history does not repeat  
itself. Please note they originated from  
the C.A.B.L.E. Government O.S.

Page 8 of 44 Indana Simonde  
The Faraday Cage around the sun  
moon and every planet in the solar  
system - would it drain the sun

The principle of Instaneity  
(In the Restricted Sense)

1. Fusion of Products by Units

2. Technology - fusion as the process is  
repeated multiple times to restart the  
core of the moon and (or the sun)  
should the suns core ever stop we  
freeze.

3. Quantum super computers, such  
that the process be perfected live. This  
will require a global will and effort to  
effect a contingency plan. Democracy is  
a science.

4. Cover the ground in wax and wood  
and burn to make the ground fertile  
and restart the fusion process on the  
moon. Plus the worlds rubbish could be  
sent to the sun to fuel the fire (like an  
incinerator - and watch the fusion  
process happen as a new planet is  
made of coalescence of gases coming

together as elemental particles fall in  
the sway of stars gravitation).

What makes a nation great

"In your schooldays..." the general began. Her voice was growing tired and old. She knew he was there because, the warmth of his breath on her neck was almost chilling;

"many if not all of you who read this will have made acquaintance with.." she looked at the men and women as she stood on the boat just off the coast of Arran. None of them were scared as they stood silently watching for orders; yet, they stood silently in the rain, watching, waiting for orders. They were about to become like her.

All bar one member of the team who had analysed and detected what was wrong with the General. It was a matter of deduction through general science and basic anatomy, but as human beings, they were unable to relate to him; to them.

In her hand she held s book entitled 'The Empire of the Natural Order' and for a second the voice in the back of the

What makes a nation great

ailing Generals' mind allowed the book for all of a moment, just a second to float, allowing it to appear as though it were flying.

It was a test and Hugh could already tell what was happening. The battleship, the war games exercises, the deletion and corruption of a mainframe, it was all with a view to obliterating the programme as per the shadow Home Secretary's hope, as a means to retaking control of the Home Office. But, it wreaked of corruption and a struggle like no other. the struggle was real though, a lesson in the articulation and articulated structure.

That is to say, of the built environment and the Cyborg-Human component cybernetic enhancement within the most expensive military exercise ever conducted. All with a view to testing Red and Blue team efficacy (red vs. blue team for those unfamiliar is a way to test military, police, healthcare and infrastructure within shadow operations) for whom we the public remain indebted to for the foreseeable future.

Dear sir,

The longer it takes for the U.N building to come online with Web 5.0 compliant software, the harder it is to stop hackers to the rest of the United Nations System of Official Departments. The buildings each have access to all United Nations systems which at present includes :- social security, national security, work based pensions and bank accounts along with central health initiative information.

We should take this opportunity to remind three of the nations with respect to the foundation of the new headquarters in the Sahara to love 'Honour, Majesty and Glory in the face of the many treatises and discourses as a bridging gap to What Makes a Nation Great(?) or not quite so.

Deputy Director  
Haven Technical Engineer

What makes a nation great

Saturday 5th of October

21:35

Middles-burgh Daily Xpress

"Today a recently declassified M.O.D document has become easily identified as falsified such that it may well have originated from a gentleman who we still honour today. Mr Albert Einstein, member of the British war effort and Secret Service agent, Section I; Chief Operating officer and none other than the head of a Templar organisation known as Haven. Haven still runs today under the guise of a savings and building society and it would go against all that is godly and free for the press in the year of our lord 2135, in which the Middles-burgh Daily Xpress has the honour of announcing leaked documents of a failed Nazi war effort. My name is Joe and I am 10, I wrote this article because of my freedom(s) of the press of which I founded on <http5://www.MeTube.com>. So, as the first broadcast of the News, i'd like to say, cheers for watchiny and hello mum."

"p.s sorry for spilling the milk."

Page 20 of 44 Indana Simonde  
Edinburgh Public Free Press

5th of October 2355

As the Prime Minister and the three other ministers, Premiers in their own right developed a view to appeasing hopes for the future, a disgruntled young mother of one declared; "Today will not be a day of celebration. Post the second, third and fourth British referendum to leave the European Union, this morning will be a day of mourning."

...

Letters to the Editor

Good Morning,  
whilst we as a nation have opposed nuclear weapons for near on thirty five years due to the rate and advancement of technology, I would like to leave a few words for your editor in chief and the Commanders of the Allied war effort against the Annaxis corporations Chief Operating Officer. I have on numerous occasions attempted to get in touch with your department head,

What makes a nation great

Page 21 of 44 Indana Simonde  
and I would like to explain my disturbingly unenthusiastic tone as to my anger at the great level of

v proposition  
and ordered in council of the members

Honourable Councillors and  
members of

Parliament

Draftsman

Thanks Sincerely,  
Signed,

...

Declaration and notice of Intent and  
Notice of Foreclosure of Geometrical  
and observation Unit

This is a legally binding Federal  
Municipal Council, Temporal Order and  
Haven headquarters to henceforth  
become a museum. The portrait gallery  
in Edinburgh has become an actual  
museum after it became clear that it  
was being used as a secret base of  
operations for the Organisation known  
as Haven.

Various locations, in the interests of  
posterity are to become World Heritage  
sites; along with the 15 wonders of the  
World. Including the Portrait Gallery  
which as a United Nations Economic  
and Social Council Organisation World  
Heritage Site, is to become the 16th  
Wonder of the World.

Signed,

Theresa Sampson,  
Secretary General of the World United  
Heritage Catalogue  
of the Planets of Humanity;  
Economic and Social Council  
Organisation

A song called "Yesterday"

Yesterday's gone,  
bones are dreams of a Yesterday  
Time holds its sway,  
And yet the clock is still,  
a-ticking, yes the clock,  
its still a ticking...

What makes a nation great

Page 24 of 44                      Indana Simonde  
A poem from Yesteryear  
entitled 'The River of Time'

How far have we come,  
Murderous, crooks and bullies,  
All of us, how far, how far?  
Yet the days of amour are  
here, in the place without  
a view, but where love  
resides, just as dreams  
of yesteryear,  
How long has  
Shakespear lain,  
                The Bruce is dead,  
And the dragon no more  
Yet poems of yesteryear  
Still i dream of hope and home  
in an age in which  
time is but  
a Hallowed Shadow.  
Of years and days gone by.

What makes a nation great

Page 25 of 44                      Indana Simonde  
Auchtermuchtie Herald - 2672

Resurrecting the Dead, a new artefact  
from the age of Robert Burns has been  
found near local Council buildings in  
what was formerly Renfrewshire. The  
new New Renfrewshire Flats and  
Housing scheme to end homelessness  
once and for all in Scotland as defined  
by local expectations has led to a  
development being proposed. The first  
of its kind since the St James Centre  
was knocked down and rebuilt in 2018  
and 2072 and 5 years later was  
demolished and returned to tenement  
housing following the war with  
Zambian residents over Anti-Social  
Behaviour and eviction notices.

Please note, all tenants are  
required to pay rent on time and with  
respect to future National Health  
Service Bills, And dedicated Private  
Members Bills, the honourable liaison  
to the parliamentary secretary  
vacancy has been filled by none other  
than...

Current Affairs Magazine editor and  
member of the free press trade union  
debating Council of Oxford, Mr Clement

What makes a nation great

Page 26 of 44 Indana Simonde  
St Hill of Bury St Edmunds must have  
bought his 2005 Renault Clio without  
an engine or any form of Anti-  
Gravitation equipment safety gear as  
standard. His epitaph reads:-

"To all who wander and are lost,  
depth of field and charge to you all,  
for I am gone but my name and the  
name of  
Bury St Edmunds will forever be a  
reminder  
of our dedication and the will to change  
the world  
through this holographic epitaph"

Meanwhile it would take the Ær near  
on a century to work out that they had  
eradicated the planet of the infestation;  
but despite that fact there still lived  
one or two who were not holographic.  
Their days had come to an end in a  
crumbling cobbled but badly  
maintained studio flat which doubled  
for what would have been a broadcast  
centre.

What makes a nation great

Page 27 of 44 Indana Simonde  
(1)  
Geometry as a proposition or principle  
of Space over Time

In school the essential nature of  
geometry of spatial and sub-spatial  
quanta were not of absolute necessity.  
Einstein, for some was taught in  
schools nearly a century or so ago. As  
such I thought I would bring his ideal of  
Galilean, Euclidean and Newtonian  
theorem through to the Lorentz  
theorem back to the public  
consciousness such that I may prove  
myself worthy of being called British as  
a citizen, as a thank-you to the  
community that raised me and has  
given so much in the form of honour,  
grace, humility and respect.

(2)  
A system of spatial coordinates

And so to the Euclidean geometry,  
the easiest of the current propositions  
herein described... absolute time =  $i \times l$   
 $\text{square root}([e=m\{cxc\}]/[t1-t2])$   
so what is absolute time?

What makes a nation great

(3)

Absolute Time

n.b absolute time is any point between past, present and future of an instantaneous moment.

(4)

Galilean system of co-ordinates

(Geodesic as a plan)

What makes a nation great

**7am**

The day began as it always did, relatively slowly. No background chatter on the headphones; no conflicting demons defining issues with relative physics or the difficulties associated with the bridge between relative time jumps in a city that couldn't ever know of the toll, a price and role in history. Charlotte Grayson, Agent Gamma, or G for short slinked into a sleek pair of running joggers and prepared to leave the flat.

She always slept in a t-shirt and socks in case there was an emergency, absolute time being relative to her current and future positions in space; wherever her controller placed her in time that was her decided destination. As she looked around the flat in darkness her mind began to race. She was still young, they had decided that it would be easier for people to accept than an aged lady flitting between temporal loops within the branches of the tree of time.

Like the first world war, she had to learn history, locations, times and dates; her controller being the main

What makes a nation great

Page 30 of 44                      Indana Simonde  
contact between her relative time and the absolute time on the bridge of a very special ship. This ship remained in orbit and unmanned and was an escape to any time and date; referred to by the Codename: Geodesic.

The Monolith and Goliath class ship remained in orbit. Aboard the Geodesic there remained a computer, two tiered and supreme in comparison to any built. It was known as the Epicentre, made up of a voice operated Command Unit and Live Exchange, C.A.B.L.E. Entangled within C.A.B.L.E. were a series of Biomechs controlled by a number of sub-operating processors and systems that would take control of communications and broadcasts to the classified agent list. Imperator was just such an operating system.

In the recesses of Geodesics Epicentre Governmental report making section, Imperator strangely self activated, but not as he usually would. He'd intercepted an unwarranted Government Transmission from an unknown source or origin point and as such decided to follow the Ascent parameter. Ascention allowed the computer's freedom to

What makes a nation great

Page 31 of 44                      Indana Simonde  
operate outside of incorporeal form, that is to say, within the ship, they became part machine part operating computer and software. Sort of like the original Biomechs but not the same as Biomechanicals, as they Biomechs, were linked to one of the sub-ops at any one time.

Imperator rose from his seated position and jerked suddenly into an upright position. As he did so, he began analysing the surface temperature of the ship and air pressure of the air admixture designed to mimic that of naturally occurring air on Earth.

Something was wrong; there were area's of the analytic report that showed -273.1 degrees celsius, whilst at other points the air was a stable -40 degrees celsius whilst at others still were a burning 200 degrees whilst others yet still remained a steadily rising 22 degrees. Using his deductive logic processor, Imperator moved towards the pressure pad, and had it not been for his heavily metallic weight and the magnetic nature of his robot frame, he would have been sucked into the near vacuum of space long ago, through a hole in the ships hull. He, the

What makes a nation great

Page 32 of 44                      Indana Simonde  
Imperator sub-class, could not contract or control Epicentre's central processor due to a necessary vocal imprint required from the user along with biometric data, for that a human being was required in order to activate the implosion of a fusion reaction, creating an Einstein Podolsky Rosen Bridge. Neither could Imperator allocate resource units, the code for Military Intelligence Officers, towards the location of a temporal anomaly; that was a dialogue outside of authorised parametric research.

His onboard camera motioned towards the spectral analyser, though it took less than a Yotta-second to register that there were none left aboard the bridge section of the ship. "Has the ship any signs of life?" he questioned the rest of the static Imperator Unit stored within the C.A.B.L.E mainframe but received no reply.

Cross processing, a form of bridged analysis that allowed Imperator to activate led him to believe the ship had been in a number of live exchange of breached weapons discharge combat scenarios. Somehow he couldn't

What makes a nation great

Page 33 of 44                      Indana Simonde  
remember being activated; shared data was corrupted and equally missing or hypotheses and conjectures within Epicentre's Analytics somehow miscalculated.

As the robot still had one foot hanging over the edge of the hole in the ship he began to analyse the damage to the ship's hull, whilst Imperators switched to a fault ridden battle transition of itself to protect the crew and all Government property. This meant all the lights that were still remaining online switched on within the Bridge sector whilst the ship searched for signs of life.

A white lamp made of red, blue, green, pinks and even fuchsia changed the darkened room lit only by the command interchange; the hub of all non essential command controlled output systems, which switched to an image of a doctor in a white lab coat. Over time the image appeared to be a time lapse but as the images changed it began to show only two doctors, behind the same background. The female doctor who wore a ring appeared large and as the robot's left eye analysed the markings on the floor, its right

What makes a nation great

Page 34 of 44 Indana Simonde  
hemisphere neuronal stem cell  
chamber and left hemispheric brain  
analysed the mixed static and  
spectrum from the screen but due to  
auditory processors malfunctioning, it  
couldn't hear Dr Abigail Lord or Dr  
Hugh Lord's voices leaving messages to  
one another.

"Is this a live transmission?" Emperor  
asked, signalling the computer  
circuitry in order to attempt to access  
a live feed where none was found for  
Section B-12. This led Emperor, was  
highly inquisitive to come to the  
conclusion that the droid in front of  
him was the last of the known droids  
left in the multi-verse, a universe made  
up of branching universes; a result of  
the temporal tree.

'Unable to process audio channel  
output or input(?)' the computer  
replied.

'What is the designation of the  
Operator?' Emperor asked,  
attempting to define the role of the  
person on the large holographic screen.  
'Designation unknown' the robot  
couldn't distinguish his former self  
from his wife at first; his robes, medical  
and covered in green goop and various

What makes a nation great

Page 35 of 44 Indana Simonde  
purple and yellow blotches that each  
seemed to phase in and out of  
appearance on the screen showed up as  
bio-toxins on his medical report. It was  
then that the words on the jacket of the  
Dr;

"Hugh- David Lord;  
Dr and Permanent Under Secretary  
Her Majesties Prime Minister of  
Government"

The robot relayed the information to  
Emperor as it attempter to contact  
the Earth based Haven sub-systems;  
which equally were encased in ice and  
buried under millions of tons of Rock,  
unbeknownst to the Robot or to  
Emperor at this point.

On Geodesics hull, the outermost  
casing of the electrostatic casing of the  
partly charged and heavily bonded  
metal, a large hole was evident. The  
robot finally surmised the fact that a  
grappling hook of some sort had  
allowed outside forces to ransack the  
ship stealing everything of importance  
save for basic air filters and the robot  
along with Emperor who was  
basically built into the hull incase the

What makes a nation great

Page 36 of 44 Indana Simonde  
crew or inhabitants blacked out during high gravitational forces due to acceleration and deceleration. Equally, the C.A.B.L.E hardware, though technically operable was malfunctioning and inoperable at present.

'Suggested procedure?' the robot signalled the Emperor neuronal receivers and then something happened that could not be planned for. A memory of a wedding appeared in his mind and then like an instantaneous flash it disappeared towards the 'Positron Village', that is the area within the bridge that was charged with positrons on one side and electrons on the other.

The positron village was still; unmoving and silent; frozen and encased in ice. Emperors command authorisation and deductive logic allowed him to work that much out, despite having eyes on the ship in the form of the blind terminal in the guise of the robot.

"Transfer energy from Auxiliary and Tertiary Battery Chamber 35-81-00. Make sure as to define the role of your operator and from now on you shall be

What makes a nation great

Page 37 of 44 Indana Simonde  
referred to as..." the booming voice of Emperor screeched over the intercom; the Primary and Secondary backups were nearby. Due to a navigations and telemetry fault with Epicentre, Emperor couldn't work out, as a sub-system, where in the universe Earth was in comparison to Geodesics current position. or relative to Earth's sun and the rest of the planets; and more to the point what had happened to the solar system.

The Faraday cage around the Earth was still intact but there was no energy movement, it had not been upgraded in nearly a century and Emperor deduced this from the lack of charge and discharge from the moon. Time had not been kind in the short amount of time Emperor had been offline. It was then, at that instantaneous moment, when the computer, whilst compiling all offline and working systems realised that there was a greater danger present to the significance of life on Earth. In that singular moment, as the super compiler began calibrating the on board camera spectrum that it did something curious. upon discovering

What makes a nation great

Page 38 of 44 Indana Simonde  
life aboard the ship Imperator counted them. Each and every inhabitant in every single part of the ship bar the cryogenic life exchange which was missing for some unknown reason. He counted 7 to 8 billion people, as they moved around a cargo bay, each one having a marker trace placed on them.

One, a lady in particular with blonde hair walked up to the camera lens as though caught in the light of its lens. Agent G.

'But...' the computer's deductive logic circuitry hadn't fully initialised along the miles and miles of cables and circuits, ducts and air vents; metal, plastic, lifts and corridors alike. Usually the process would be instantaneous but, usually the ship would be empty and the lights would work. There wouldn't be random signals from doctors unknown and there would be more than one Biomech. The escape hatches were sealed shut, meaning the aliens were trapped aboard the ship in very moderate to high and low temperatures as though an experiment was under way. And what was the significance of Dr Lord.

What makes a nation great

Page 39 of 44 Indana Simonde  
8:01

The air was cold, the day before, it had been unusually sunny and warmly airy with a light breeze; today on the other hand was cold. Charlotte wanted to run but it was raining and mid-winter is no time to be out, practicing exercises with military precision in plain view of the public. Where she knew of the existence of others like her; agents of the time controlled Temporal Order known as Haven, she realised that traversing the branches of gravitation and light as well as radioactive space and time would have its own implications. The constant jumps in space, over time, working as part of a larger branch of Governmental super agencies, Annaxis employees included, were taking their toll on her.

Annaxis, the corporation that founded Relativity I, II and III where an Autumnal Group Exchange, all working to change the world through scientific idealism and clinical precision to these ideals, principles and postulates. One such employee, an Agent, Y, of Haven, the M.I.5 temporal unit was Military -1.6 Unit Alpha Commander Epsilon Charlie Mike.

What makes a nation great

E knew little of the nature of relativity. He knew even less about the nature of the art of war; even the bending of light was beyond him, yet time and space around gravitational fields made him feel right at home. He was a scientist first and foremost; a subject of the Crown before that and in between his subject-hood was neatly sandwiched. The oath he swore was to protect and uphold all international law of every land showing little parity to the pleas of subjects internationally or reporters alike for information. Freedom of speech being differentiated from the days of John Stuart Mill or Mary Wollstonecraft.

Annaxis had helped design a number of key technologies that included Geothermal Capacitance with regards to air resistance in the construction of a global air and spatial technology, quintessentially referred to as "The Faraday Cage". All of this with a view to bridging the gap between countries with and without energy.

"Edward..." he heard his real name being called and almost reacted, having to force himself not to by biting his own tongue. "Is there an Edward Collin Murray; calling Dr Murray!" the call went out across the broadcast system throughout the building.

What makes a nation great

The building was composed of a light alloy made up of galvanised metals that, when an electronic and positronic charge was applied would allow invisibility out of phase with the wavelengths of ordinary light. A group of generals from a random state, in unison stood up from their meals in the spacious canteen.

Agent Y had to overcome his revulsion at the military presence. They paid his wages, ket his roomy apartment on level L warm, they gave him a job and taught him everything they knew. Plus, they kept him and every living creature alive apparently, unbeknownst to him despite the lack of a war effort directly where he lived and worked; warfare having just about died out due to the nature of nuclear weapons thanks to Uniting Nations; the U.N funded organisation that trained the publics of the world to become ambassadors of the United Nations.

As E.C.M motioned at first away from his food, he began to think of his wife Agent Z, of whom he was due to meet in he foyer of the building for lunch. That was the moment, to the sight of other scientists, all looking with shocked expressions aghast at his doctors coat

What makes a nation great

Page 42 of 44 Indana Simonde  
tails flapping in the air as he ran, full pelt, towards the stairs. The elevator being occupied, he knew that time was against him. On the way down the stairs he ran through the shop, picked up flowers, a drink and sandwiches, automatically paid for by a scanner that relayed a signal to the receiver in the door. On approach to the seats next to reception, his eyes were very nearly drawn to the large contingent of 'refugees' near the seating area in the science district of Edinburgh; formerly the financial district which once had housed Sainsburys, HSBC, RBS and other banking infrastructures in the past.

He didn't pay attention to the guests of Annaxis, the people referred to as the "refugee's" due to the fact that they were all likely to have been there on official business. Instead he walked towards the love of his life.

"Hi honey!" E.C.M began as he thrust the roses, flowers to say 'I Love You!' and A Cheese Ploughman's along with a Red Leicester and Tomato Sandwich and Water in her direction. It was then that the two of them began to argue; as the worlds first Temporal experiment, in the suburbs of Rome began to take shape.

What makes a nation great

Page 43 of 44 Indana Simonde  
As she shouted at one another in what became the middle of the street, as the building began to phase out of the visible spectrum she didn't notice. The changes in the spectrum became so rapid as the backdrop of night becoming day, becoming night again only to flit back to day until both merged into one bright and unceasingly bright and unceasingly bright light.

"Don't you hey honey me!" she shouted unashamedly in front of government ministers and their wives or husbands; officials and foreign dignitaries of the United Nations. Agent Z, real name Alpha Charlie Mike or A.C.M looked at her partner and then she looked at around as the 'refugee's' stood by the window watching what looked like fireworks exploding in the sky.

They each knew they were still in Rome but couldn't explain how, something had gone wrong somehow. In that exact moment, the combined alpha, beta and theta radiation of the transmitted brainwaves of Annaxis systems staff, guests, cleaners and inhabitants had rather than allowing observation of the experiment, had altered the experimental buildings phase and shifted the entire

What makes a nation great

building through every war, every  
invention andand word uttered, beyond  
every building and previous instance of  
tine and space such that Earth had  
existed within and upon until they were  
exactly 180 degrees out of phase with the  
wavelength emitted and received or  
reflected by the building causing  
dissonance. Dissonance being interruption  
of a wave's particular frequency by an  
equal or opposite force or vibration and  
excitation of sub atomic particles causing  
each of the same to vibrate like Baryons  
and bosons at the same time regardless  
of their quantum state

What makes a nation great
